About us

Carsten

- ▶ Debian Maintainer
- ▶ Everything related to Thunderbird/Icedove

Guido

- ▶ Debian Developer
- ▶ Nowadays mostly libvirt-* and git-buildpackage
- ▶ Debian LTS Team member
- ▶ Freelancing Software Developer

What's Debian

A universal operating system

- ▶ Free operating system and software collection
- ▶ > 45.000 binary packages
- ▶ *One* central source for all free software
- ▶ ~10 Linux architectures
- ▶ Downstreams: Raspbian, UCS, Tails, Ubuntu, grml, Skolelinux, (> 130)

- ▶ Focus on quality: Debian Policy, archive rebuilds, piuparts, lintian, autopkgtests, adequate
- ▶ Focus on automation: tasks, virtual packages, alternatives, debconf, dbconfig-common

A project

- ▶ 1700+ contributors
- ▶ Developers, non uploading contributors, maintainers
- ▶ not single company backed

The upcoming release

Stretch

Figure 2: Stretch

Schedule

Figure 3: Stretch Release

Whats new in Stretch

- ▶ Reproducible Builds

- ▶ New architecture: mips64el

- ▶ Lots of updated Software: PHP 7.0.11, Python 3.5.1, GNOME 3.22, LibreOffice 5.2.2, docker 1.11, ...

▶ Kopano?

Kopano in Debian

Z-Push

- ▶ D-Push
- ▶ currently stalled at 2.0.7

ZCP → Kopanocore

- ▶ Started in 2011 with 7.0.X
- ▶ All dependencies (gsoap, libvmime, ...) are packaged and look good for Stretch

- ▶ Upload to 7.2.1 to NEW on 2015-11-01
- ▶ Rejected by Debians FTP masters in March 2016
- ▶ GCC5 transition
- ▶ Renaming to Kopanocore

- ▶ Update to 8.1.0
- ▶ New packages: kopano-backup, kopano-archiver
- ▶ Missing: kopano-presence
